What is a class?

Class is a foundation in which objects are created, it combines fields and methods into a single unit.

What is an instance?

Instance is what you created when using constructor to make an object

What is a field?

Field is a variable of any type located on a class or constructor

What is a method?

Method is the statement in a code

What does it mean that a field or method is public or private?

Public: field or method is accessible by any other code in the same class or even other class that references it.

Private: field or method is only accessible by code in the same class or constructor.
